[kubelet-finalize] Updating "/etc/kubernetes/kubelet.conf" to point to a rotatable kubelet client certificate and key
[addons] Applied essential addon: CoreDNS
[addons] Applied essential addon: kube-proxy

Your Kubernetes control-plane has initialized successfully!

To start using your cluster, you need to run the following as a regular user:

  mkdir -p $HOME/.kube
  sudo cp -i /etc/kubernetes/admin.conf $HOME/.kube/config
  sudo chown $(id -u):$(id -g) $HOME/.kube/config

Alternatively, if you are the root user, you can run:

  export KUBECONFIG=/etc/kubernetes/admin.conf

You should now deploy a pod network to the cluster.
Run "kubectl apply -f [podnetwork].yaml" with one of the options listed at:
  https://kubernetes.io/docs/concepts/cluster-administration/addons/

Then you can join any number of worker nodes by running the following on each as root:

kubeadm join 172.31.87.78:6443 --token ut4opm.bfe28j57nfncds8m \
        --discovery-token-ca-cert-hash sha256:be2108f5129c3aac922280e2219dcace14c20204be972d8823eacc59bf6528e6
ubuntu@ip-172-31-87-78:~$
```

Copy the mkdir and chown commands from the top and execute them. mkdir -p $HOME/.kube
sudo cp -i /etc/kubernetes/admin.conf $HOME/.kube/config sudo chown $(id -u):$(id -g) $HOME/.kube/config

```
        --discovery-token-ca-cert-hash sha256:be2108f5129c3aac922280e2219dcace14c20204be972d8823eacc59bf6528e6
ubuntu@ip-172-31-87-78:~$ mkdir -p $HOME/.kube
ubuntu@ip-172-31-87-78:~$ sudo cp -i /etc/kubernetes/admin.conf $HOME/.kube/config
ubuntu@ip-172-31-87-78:~$ sudo chown $(id -u):$(id -g) $HOME/.kube/config
ubuntu@ip-172-31-87-78:~$
```

Add a common networking plugin called flannel as mentioned in the code.
kubectl apply -f https://raw.githubusercontent.com/coreos/flannel/master/Documentation/kube-flannel.yml

```
See 'kubectl apply --help' for usage.
ubuntu@ip-172-31-87-78:~$ kubectl apply -f https://raw.githubusercontent.com/coreos/flannel/master/Documentation/kube-flannel.yml

Broadcast message from root@ip-172-31-87-78 (Sat 2024-09-21 14:22:30 UTC):

The system will power off now!

Connection to ec2-52-91-240-34.compute-1.amazonaws.com closed by remote host.
Connection to ec2-52-91-240-34.compute-1.amazonaws.com closed.

C:\Users\ACER\Downloads>ssh -i "exp4key.pem" ubuntu@ec2-52-91-240-34.compute-1.amazonaws.com
ssh: connect to host ec2-52-91-240-34.compute-1.amazonaws.com port 22: Connection timed out

C:\Users\ACER\Downloads>ssh -i "exp4key.pem" ubuntu@172.31.87.78
ssh: connect to host 172.31.87.78 port 22: Connection timed out

C:\Users\ACER\Downloads>echo komal
komal
```

Step 7: Now that the cluster is up and running, we can deploy our nginx server on this cluster.Apply this deployment file using this command to create a deployment kubectl apply -f https://k8s.io/examples/application/deployment.yaml

```
daemonset.apps/kube-flannel-ds created
ubuntu@ip-172-31-87-78:~$ kubectl apply -f https://k8s.io/examples/application/deployment.yaml
deployment.apps/nginx-deployment created
ubuntu@ip-172-31-87-78:~$
```

kubectl get pods

```
ubuntu@ip-172-31-87-78:~$ kubectl get pods
NAME                                READY   STATUS    RESTARTS   AGE
nginx-deployment-d556bf558-2nwj8    0/1     Pending   0          6m54s
nginx-deployment-d556bf558-vbnn6    0/1     Pending   0          6m54s
ubuntu@ip-172-31-87-78:~$
```

POD_NAME=$(kubectl get pods -l app=nginx -o jsonpath="{.items[0].metadata.name}") kubectl port-forward $POD_NAME 8080:80

```
ubuntu@ip-172-31-87-78:~$ kubectl port-forward $POD_NAME 8080:80
error: unable to forward port because pod is not running. Current status=Pending
ubuntu@ip-172-31-87-78:~$
```

Note : We have faced an error as pod status is pending so make it running run below commands then again run above 2 commands.

kubectl taint nodes --all node-role.kubernetes.io/control-plane-node/ip-172-31-20-171 untainted

kubectl get nodes

```
ubuntu@ip-172-31-87-78:~$ kubectl taint nodes --all node-role.kubernetes.io/control-plane-node/ip-172-31-20-171 untainted
error: at least one taint update is required
ubuntu@ip-172-31-87-78:~$ kubectl get nodes
NAME              STATUS   ROLES           AGE   VERSION
ip-172-31-87-78   Ready    control-plane   63m   v1.31.1
ubuntu@ip-172-31-87-78:~$
```

kubectl get pods

```
ubuntu@ip-172-31-87-78:~$ kubectl get pods
NAME                                READY   STATUS    RESTARTS   AGE
nginx-deployment-d556bf558-2nwj8    0/1     Pending   0          41m
nginx-deployment-d556bf558-vbnn6    0/1     Pending   0          41m
ubuntu@ip-172-31-87-78:~$
```

POD_NAME=$(kubectl get pods -l app=nginx -o jsonpath="{.items[0].metadata.name}") kubectl port-forward $POD_NAME 8080:80

```
ubuntu@ip-172-31-20-171:~$ kubectl get pods
NAME                                READY   STATUS    RESTARTS   AGE
nginx-deployment-d556bf558-vz8rv    1/1     Running   0          3m4s
nginx-deployment-d556bf558-wz5wc    1/1     Running   0          3m4s
```

Step 8: Verify your deployment
Open up a new terminal and ssh to your EC2 instance.
Then, use this curl command to check if the Nginx server is running. **curl**

--head http://127.0.0.1:8080

```

Accept-Ranges: bytes

ubuntu@ip-172-31-20-171:~$
```

If the response is 200 OK and you can see the Nginx server name, your deployment was successful. We have successfully deployed our Nginx server on our EC2 instance.

Conclusion: In this experiment, we successfully installed Kubernetes on an EC2 instance and deployed an Nginx server using Kubectl commands. During the process, we encountered two main errors: the Kubernetes pod was initially in a pending state, which was resolved by removing the controlplane taint using kubectl taint nodes --all, and we also faced an issue with the missing containerd runtime, which was fixed by installing and starting containerd. We used a **t2.medium EC2 instance with 2 CPUs** to meet the necessary resource requirements for the Kubernetes setup and deployment.
